WSBIS Working Team Meeting 9/24/2015

Present: Roman, Bill B, Steve K, George, and Heath
Phone: Larry and Margaret

Review minutes: There were comments made by Bill, and those were added to the 8/27/2015 minutes before the meeting. No further comments noted.

Interweaved inspections:
- There is an understanding that everything will not be handled perfectly through the data migration.
- Due to some of these side cases, it appears there is going to need to be a 'hidden' ability (for Larry/George, or delegated person) to switch a program manager/ownership from LP to BPO or vice versa.

LP Change Specs (9/24/2015):
- Based on discussion in the shared structures (interweaved inspections) there is a change to item 2d. That is that the view mode can be changed via a 'hidden switch' to catch a few side cases that might not migrate as anticipated.
- Discussed item 2e – adding program manager to the config file
- Cosmetic Changes #4
  - The WSBIM currently exists as part of the WSBIS application deployment.
  - Heath will add anchors/destinations to the LP coding guide as appropriate when he adds the anchors for the BPO coding guide. No separate file is needed at this time.
- Forms Changes
  - 1b.ii. – Larry verified that the intent of these fields is the same for LP and BPO, so the wording can be kept as it is in BPO.
  - 2a – Bill noted a different form for LP than current BPO form
  - 4 – Larry verified that Note '3' is available for LP use in the note form
  - 5 – Larry concern with the locals being overly restricted with the data checks related to repairs. Steve noted that the data checks can be customized to run checks differently based on LP/BPO structures.
  - 9a – George likes the idea of having the Custodian Code on the BridgeID tab as it currently is in LP, so BPO will follow LP's lead in this so that portion of the forms aligns.
  - 10a.iii. and iv. – Larry is good with Median Code and Open Closed Posted being where BPO currently has them (Layout and NBI tabs respectively).

Dev Express:
- Dev Express software used by the developers has not been updated in quite some time due to a need for a known, stable development environment.

- This means Dev Express has fallen outside of the available support window and really needs to be updated.
- Steve proposed:
    - Finalizing the October deployment
    - Post October deployment Steve will update Dev Express on his machine to determine if there are breaking changes and working through necessary adjustments
    - Once the update is determined to be safe, then Bill can update his software.

WSBIS Initialization:
- Steve conveyed the once viable, recently broken, ability to initialize WSBIS without a 'system file.' As that functionality is broken, he wanted to know if local agencies wanted that functionality so time could be allocated to reestablish the functionality or if he should just disable the functionality.
    - Decision was to disable the feature

NBI/NBE Translator:
- The BRD will ultimately be decommissioned
- This is an outstanding item we need to keep tabs on
- SHOULD be able to use BRD in April
- For October 2016 submittal, we will need a re-factored NBI/NBE creation tool and change the pointers from the BRD server to the server 02P

Next meeting Tuesday October 20th

Known agenda items:
- Dev Express update
- Coding update from Bill
